

REFERENCE CASE: Health Care

Operating Rooms

The third largest hospital in Sweden, with connection to the University of Malmo and Lund’s research center, is using the Longopac Stand for their daily disposal and handling of waste. Urology, Cardiovascular, Orthopedic, Transplant and General surgery clinics, are all equipped with either the Longopac Stand Maxi or Longopac Mini versions.

In the operating rooms, which are operated 24 hours 7 days a week, the hygienic aspect is of highest importance as well as the possibility to enhance flexibility of the working environments.

“To be able to quickly change bags is quite comfortable and even better when it can be changed at any occasion given and placed in the room where we consider it best for the moment.

Sometimes we need to change a bag even if it is not full and the Longopac system with its endless tube gives us that possibility; says Jessica Aarni, with over 10 years of experience from surgical services.

// Skanes University Hospital  
In my role as purchase manager  
I believe I know what's the best choice  
for the operating rooms.//
